NORFOLK.

INTERIM REPORT OF MEDICAL OFFICER OF HEALTH, FOR THE YEAR ENDING
December 31st. 1941-

To the Chairman and members of the Council:

The work of the Sanitary Authority has been carried on normally during the year.

official

The number of/Evacuees remaining in the district at the end of the year was 378.

The health of the district remained excellent throughout except for widespread epidemics of Measles and Whooping-cough, but in both these cases the disease was of a very mild type, and there were no deaths. No cases of malnutrition were brought to my notice. Diphtheria Immunisation was carried out, and about 80% of children of school age were afforded protection, and a fair proportion of children under school age also.

All statistics and records of the years work are being preserved for presentation at the end of the war.

ALEX. P. AGNEW. M.B., C.M.,
Medical Officer of Health.

N.B. A brief report of the Sanitary Inspector
& Surveyor is appended.

REPORT OF SANITARY INSPECTOR. 9th June, 1942.

There are no matters calling for special comment in respect to the sanitary circumstances of the district during the year under review. The whole of the sanitary services functioned satisfactorily, with the exception that the effluent from the Sewage Disposal Works was found to be very poor, with much too high a residual of uneliminated putrescible matter. It was decided to endeavour to recondition the filter beds. A decision was also made to instal chlorinating apparatus for the public water supply. At the time of writing these works are being proceeded with.

E. J. HEAD.
Sanitary Inspector.
